The Coincidence Problem and Confining Dark Sectors

- Why do we think Dark Matter (DM) interacts with Standard Model (SM)?
- The only clue of DM and SM having interactions: Coincidence Problem.

Image Credit: WMAP

- This coincidence should be taken into account in all DM studies.

The Coincidence Problem and Confining Dark Sectors

- Why do we think Dark Matter (DM) interacts with Standard Model (SM)?
- The only clue of DM and SM having interactions: Coincidence Problem.

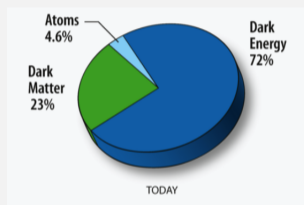

Image Credit: WMAP

- This coincidence should be taken into account in all DM studies.
- Search the parameter space of models that explain this.

The Coincidence Problem and Confining Dark Sectors

- Why do we think Dark Matter (DM) interacts with Standard Model (SM)?
- The only clue of DM and SM having interactions: Coincidence Problem.

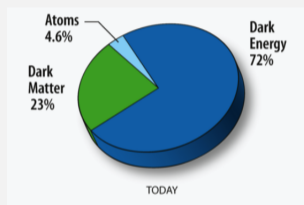

Image Credit: WMAP

- This coincidence should be taken into account in all DM studies.
- Search the parameter space of models that explain this.
- The only existing full solution to the **energy density** coincidence problem: A confining dark sector.

The Minimal Confining Dark Sector: WIMP's Next of Kin

The Minimal Confining Dark Sector: WIMP's Next of Kin

- Consider a confining gauge group $SU(N_c)$ with N_f flavors of vector-like quarks.

The Minimal Confining Dark Sector: WIMP's Next of Kin

- Consider a confining gauge group $SU(N_c)$ with N_f flavors of vector-like quarks.
- Assume the quarks form an N_f -multiplet of SM $SU(2)_L$.

The Minimal Confining Dark Sector: WIMP's Next of Kin

- Consider a confining gauge group $SU(N_c)$ with N_f flavors of vector-like quarks.
- Assume the quarks form an N_f -multiplet of SM $SU(2)_L$.
- Portal: SM electroweak gauge bosons.

The Minimal Confining Dark Sector: WIMP's Next of Kin

- Consider a confining gauge group $SU(N_c)$ with N_f flavors of vector-like quarks.
- Assume the quarks form an N_f -multiplet of SM $SU(2)_L$.
- Portal: SM electroweak gauge bosons.

$$\mathcal{L} \supset - \frac{1}{4} G_a^{\mu\nu} G_{\mu\nu}^a + i\bar{q}\not{D}q - \bar{m}_0\bar{q}q,$$

The Minimal Confining Dark Sector: WIMP's Next of Kin

- Consider a confining gauge group $SU(N_c)$ with N_f flavors of vector-like quarks.
- Assume the quarks form an N_f -multiplet of SM $SU(2)_L$.
- Portal: SM electroweak gauge bosons.

$$\mathcal{L} \supset - \frac{1}{4} G_a^{\mu\nu} G_{\mu\nu}^a + i\bar{q}\not{D}q - \bar{m}_0\bar{q}q,$$

This is WIMP's next of kin!

Why Confining Dark Sectors?

- SM has confinement; why not the dark side of the universe?
- Stabilizing DM à la SM.
- New viable dark matter masses, with rich phenomenology.
- Avenue for studying confinement.
- Possible new CP violation and out-of-equilibrium dynamics.
- The coincidence problem motivates studying confining dark sectors - even beyond the abundance calculation.

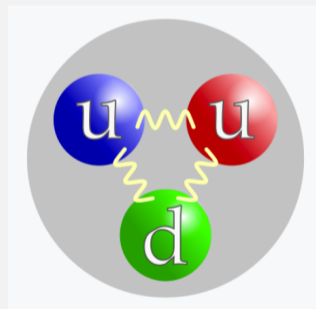

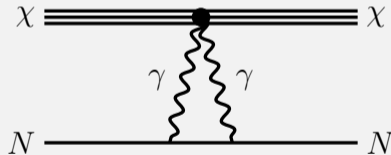

Table of All EM Moment Operators

\mathcal{H} Transformation	Diagram	Operators	Direct Detection Constraints (Naive Estimates)
\mathcal{H} -odd		magnetic dipole moment electric dipole moment charge radius anapole moment	<i>(e.g. magnetic dipole moment)</i> $m_\chi \gtrsim 50 \text{ TeV}$
\mathcal{H} -even		polarizability	$m_\chi \gtrsim \mathcal{O}(200) \text{ GeV}$
		electroweak loops	<i>(i.e. DM in SU(2)_L Triplet)</i> $m_\chi \gtrsim 200 \text{ GeV}$

Polarizability

Operator	Dim.	WC and Name
$\bar{\chi}\chi F^{\mu\nu} F_{\mu\nu}$	7	Polarizability
$\phi^\dagger\phi F^{\mu\nu} F_{\mu\nu}$	6	Polarizability

$$\mathcal{H} : \bar{\chi}\chi F^{\mu\nu} F_{\mu\nu} \rightarrow \bar{\chi}\chi F^{\mu\nu} F_{\mu\nu}, \quad \mathcal{H} : \phi^\dagger\phi F^{\mu\nu} F_{\mu\nu} \rightarrow \phi^\dagger\phi F^{\mu\nu} F_{\mu\nu}$$

- Two-nucleon form factor undetermined.
- Estimated bounds: $\mathcal{O}(100)$ GeV

Baryon Masses

$$M = \Delta M_Q + \bar{M} + \sum_{i>j} \left[-\frac{N_c+1}{2N_c} \alpha_\chi \left(b - \frac{c+2d}{m_0^2} \right) + \alpha_{em} \left(b - \frac{c+2d}{m_0^2} \right) \langle Q_i Q_j \rangle \right. \\ \left. - \frac{16\alpha_{em}}{3m_0^2} d \langle Q_i Q_j \vec{S}_i \cdot \vec{S}_j \rangle + \frac{32\alpha_\chi}{9m_0^2} d \langle \vec{S}_i \cdot \vec{S}_j \rangle \right],$$

$$a = \frac{1}{2} \langle \Psi_0 | p_1^2 | \Psi_0 \rangle,$$

$$b = \langle \Psi_0 | \frac{1}{|\vec{r}_{12}|} | \Psi_0 \rangle,$$

$$c = \frac{1}{2} \langle \Psi_0 | \frac{|\vec{r}_{12}|^2 \vec{p}_1 \cdot \vec{p}_2 + \vec{r}_{12} \cdot (\vec{r}_{12} \cdot \vec{p}_1) \cdot \vec{p}_2}{|\vec{r}_{12}|^3} | \Psi_0 \rangle,$$

$$d = \frac{\pi}{2} \langle \Psi_0 | \delta^{(3)}(\vec{r}_{12}) | \Psi_0 \rangle.$$

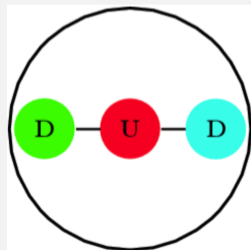

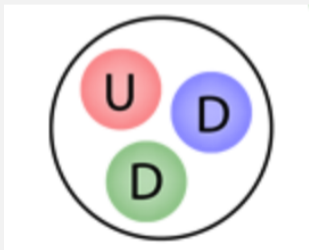

Baryon's Rep. under $SU(2)_L$ - Different (N_c, N_f)

Lowest-spin spectra:

(N_c, N_f)	$SU(2)_L$ multiplets	baryons	neutral baryons
$(5, 5)$	$17 \oplus 15 \oplus 13 \oplus 13$ $\oplus 11 \oplus 11 \oplus 11 \oplus 9 \oplus 9$ $\oplus 9 \oplus 9 \oplus 7 \oplus 7 \oplus 7$ $\oplus 5 \oplus 5 \oplus 5 \oplus 5 \oplus 3 \oplus 3 \oplus 1$	175	21
$(5, 3)$	$7 \oplus 5 \oplus 3$	15	3
$(4, 5)$	$13 \oplus 9 \oplus 9 \oplus 7 \oplus 5 \oplus 5 \oplus 1 \oplus 1$	50	8
$(4, 4)$	$9 \oplus 5 \oplus 5 \oplus 1$	20	4
$(4, 3)$	$5 \oplus 1$	6	2
$(4, 2)$	1	1	1
$(3, 5)$	$11 \oplus 9 \oplus 7 \oplus 5 \oplus 5 \oplus 3$	40	6
$(3, 3)$	$5 \oplus 3$	8	2
$(2, 5)$	$7 \oplus 3$	10	2
$(2, 4)$	$5 \oplus 1$	6	2
$(2, 3)$	3	3	1
$(2, 2)$	1	1	1

Symmetry to a Theorist

- Is the naive dim. analysis reliable?
- Partons randomly-distributed? Or there is some order?
- The right language: symmetry!
- Symmetry helps us see cancellations that are not conspicuously manifest.

\mathcal{H} -Parity: A Deep Dive

\mathcal{H} -Parity: A Deep Dive

Field	$SU(N_c)$	$SU(2)_L$	$SU(N_f)$	$U(1)_B$
\mathbf{q}	\square	N_f	\square	$1/N_c$
$\bar{\mathbf{q}}$	$\bar{\square}$	\bar{N}_f	$\bar{\square}$	$-1/N_c$

We will show a symmetry forbids the electromagnetic moments.

If $\theta_\chi = 0 \implies$ parity unbroken in IR (Vafa-Witten theorem).

$$\mathcal{H} : \chi_{B_0}, \phi_{B_0} \rightarrow \pm \chi_{B_0}, \phi_{B_0}, \quad \mathcal{H} : F^{\mu\nu} \rightarrow -F^{\mu\nu}$$

$$\mathcal{H} : \bar{\chi}_{B_0} \sigma^{\mu\nu} (\gamma^5) \chi_{B_0} F_{\mu\nu} \rightarrow -\bar{\chi}_{B_0} \sigma^{\mu\nu} (\gamma^5) \chi_{B_0} F_{\mu\nu},$$

\mathcal{H} -Parity: A Deep Dive

Field	$SU(N_c)$	$SU(2)_L$	$SU(N_f)$	$U(1)_B$
q	\square	N_f	\square	$1/N_c$
\bar{q}	$\bar{\square}$	\bar{N}_f	$\bar{\square}$	$-1/N_c$

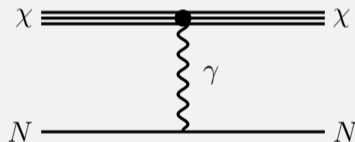

We will show a symmetry forbids the electromagnetic moments.

The relevant operators don't respect the \mathcal{H} -parity.

\mathcal{H} -Parity: A Deep Dive

Field	$SU(N_c)$	$SU(2)_L$	$SU(N_f)$	$U(1)_B$
\mathbf{q}	\square	N_f	\square	$1/N_c$
$\bar{\mathbf{q}}$	$\bar{\square}$	\bar{N}_f	$\bar{\square}$	$-1/N_c$

We will show a symmetry forbids the electromagnetic moments.

The relevant operators don't respect the \mathcal{H} -parity.

The diagram does not exist!

They don't give rise to a signal in direct detection searches.

\mathcal{H} in the UV Theory

$$\mathcal{S} : \begin{cases} \mathfrak{q}_a & \rightarrow S_{ab} \mathfrak{q}_b \\ \bar{\mathfrak{q}}_a & \rightarrow S_{ab}^\dagger \bar{\mathfrak{q}}_b \end{cases} \quad \text{with } S = \exp(i\pi J_2) = (-1)^{Q_a + k} \delta_{Q_a, -Q_b}$$

$$S^\dagger J^i S = \begin{cases} J^i & i = 2 \\ -J^i & i = 1, 3, \end{cases}$$

$$W_{\mu,i}^c \equiv \mathcal{C} W_{\mu,i} \mathcal{C} = \begin{cases} W_{\mu,i} & i = 2 \\ -W_{\mu,i} & i = 1, 3. \end{cases}$$

$$\begin{aligned} \implies \mathcal{H}(\bar{\mathbf{Q}} \gamma^\mu J^a \mathbf{Q} W_{\mu,a}) &= (\bar{\mathbf{Q}} S^\dagger) \gamma^\mu J^a (S \mathbf{Q}) \mathcal{C} W_{\mu,a} \mathcal{C} \\ &= \bar{\mathbf{Q}} \gamma^\mu S^\dagger J^a S \mathbf{Q} W_{\mu,a}^c \\ &= \bar{\mathbf{Q}} \gamma^\mu J^a \mathbf{Q} W_{\mu,a}, \end{aligned}$$

\mathcal{H} vs. \mathcal{G}

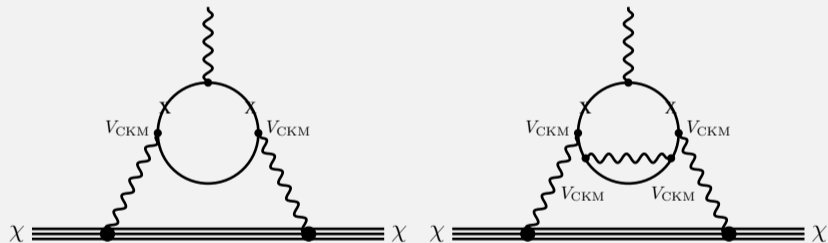

$$\mathcal{H} = \mathcal{C}_{\text{SM}} \otimes S_{\chi}, \quad S = e^{i\pi J_2}$$

- $\mathbf{q}_i \rightarrow \pm \mathbf{q}_{-i}$
- Mesons \rightarrow Mesons
- Baryons \rightarrow Baryons
- Utility: Zero Baryon EM Moments
- Broken by: SM EW Interactions

$$\mathcal{G} = 1_{\text{SM}} \otimes \mathcal{C}_{\chi} S_{\chi}$$

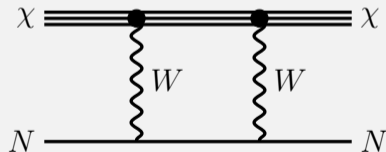

- $\mathbf{q}_i \rightarrow \mathbf{q}_i^c$
- Mesons \rightarrow Mesons
- Baryons \rightarrow Anti-baryons
- Utility: Mesons Stable
- Broken by: Dim. 5 Operators

\mathcal{H} -Parity Violation

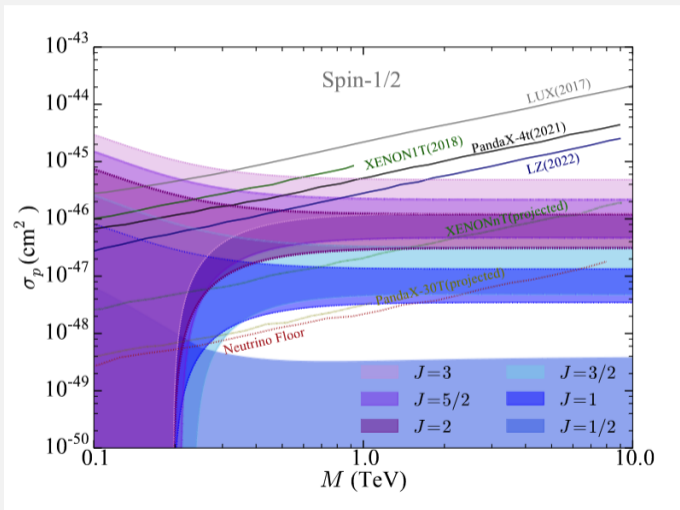

Mass Spectrum and Model-Dependent Nuances

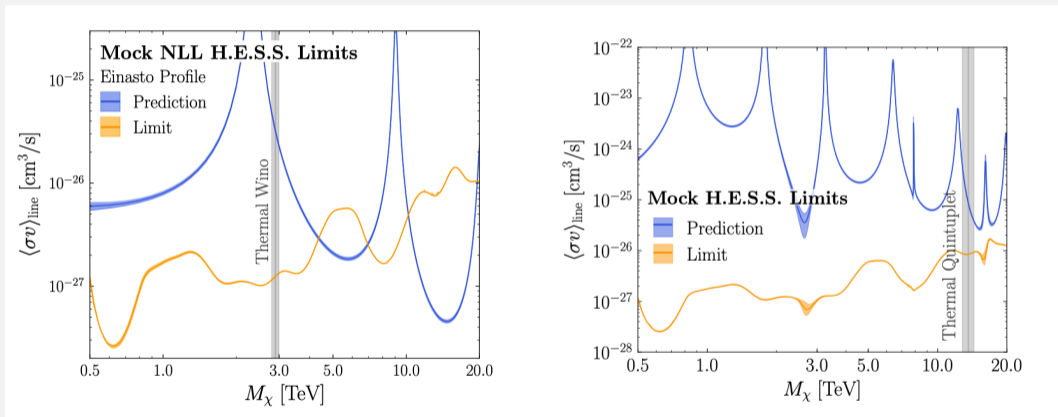

- Further nuances in connecting to direct detection signals.
- Transition moments possible: inelastic scattering.
- Lightest baryon is not guaranteed to be neutral!
- $SU(2)_L$ representation relevant for direct detection.

Direct Detection

Indirect Detection

Indirect detection signal can be reduced in asymmetric models.

Searching for WIMP's Next of Kin

- Quarks are charged under SM electroweak group.
- Ubiquitously produced at a future MuC.
- (Future of the energy frontier?)
- Potential LLP signals.
- Upcoming paper!
